11. Marketing

- 11.1 The marketing hub

1 Getting Started

This guide explains how to run your shop with the Nougta POS app, step by step. It is written for the shop owner and staff — no computer knowledge is assumed. Each task is shown as a short numbered procedure with a picture of the screen. Read Chapter 1 and 2 first to set up, then use the rest as a reference while you work.

1.1 The Home screen

The Home screen is your starting point. From here you reach every part of the app: products, customers, sales, debts, cash and settings. Whenever you are unsure where you are, return here and start again.

Figure 1. The Home screen — the starting point for every task.

1.2 Finding your way: the Menu

The Home screen shows the most-used shortcuts. To reach everything else, open the Menu.

To open the full menu:

1. On the Home screen, tap Menu.
2. The full list opens: Products, Categories, Customers, Suppliers, Inventory, Sales and Debts.
3. Tap any item to go straight to that section.

Figure 2. The Menu lists every section of the app in one place.

1.3 Choosing your language

The app speaks Arabic, French, English and Hassaniya. Set the language once and the whole app follows.

To change the language:

1. From the Home screen, open Profile.
2. Tap Preferences.
3. Tap Language, then choose your language from the list.
4. The app switches immediately — no restart needed.

Figure 3. The language selector under Preferences.

1.4 Your daily digest

The daily digest is a short report of your day: today's sales, profit, number of receipts, cash in and out, and what you did in the app. Check it in the morning to plan, and at closing to review.

Figure 4. Today at Your Shop — the day summarised in one screen.

1.5 Notifications

The app watches a few important things for you and posts an alert here: your subscription nearing its end, unpaid customer debts, and staff activity.

Figure 5. Shop alerts appear in Notifications.

Tip: Glance at Notifications once a day so nothing important is missed.

2 Setting Up Your Shop

Before you sell, set up the basics: your shop identity, your product categories, your products, your customers and (if you have them) your staff. This chapter walks through each, in order.

2.1 Setting your shop identity

Your shop name and details appear on the receipts your customers keep, so set them correctly first.

To set your shop identity:

1. Open Profile from the Home screen.
2. Tap your shop name / shop information.
3. Enter the shop name, phone number, address and currency.
4. Tap Save.

Figure 6. The shop identity screen — name, contact and currency.

2.2 Creating categories

Categories are the shelves of your shop (Food, Drinks, Cleaning...). They let you find products in a couple of taps at the sales screen instead of scrolling.

To add a category:

1. Open Categories from the Menu.
2. Tap Add (the + button).
3. Enter the category name and, if you wish, pick a colour or icon.
4. Tap Save.

Figure 7. The new-category form.

Figure 8. Your categories, used to organise products.

Tip: A few clear categories beat many tiny ones. Group products the way your customers think about them.

2.3 Adding a normal product

A normal product is a single item you sell on its own, such as a bottle of oil. This is the most common thing you will create.

To add a normal product:

1. Open Products from the Menu, then tap Add.
2. Choose Normal product.
3. Enter the Name and the Sale price.
4. Choose the Unit (each, kilogram, litre...). Tap the unit field to open the list.
5. Enter the Purchase price (what you paid) — this lets the app show your real profit.
6. Decide whether to follow stock (see below), then tap Add.

Figure 9. Step 2 — choose the product type.

Figure 10. Step 3–6 — the product form.

Figure 11. Step 4 — choosing the unit.

Field descriptions — Product form

Name	What the product is called. Keep it short (e.g. “Rice 1kg”) so it is fast to find.
Sale price	The price the customer pays. Required.
Stock	How many you currently have. Only used when Follow stock is on.
Purchase price	What you paid the supplier. Used to calculate profit. Strongly recommended.
Unit	How the product is measured: each, kilogram, litre, and so on.
Follow stock	When on, the app counts the item down on every sale and warns you when it runs low.

Follow stock is the one choice people miss. Turn it on for anything you count and re-order. Turn it off for things you never count (a service, or something you always have).

Figure 12. The Follow stock switch — on (counted) vs off (not counted).

Note: With Follow stock off, the product sells freely and never shows a low-stock warning.

2.4 Adding product variants

Some products come in versions — a shirt in S/M/L, a drink in several flavours. Instead of a separate product for each, add variants under one product. Each variant has its own price, stock and barcode.

Before you begin:

- The parent product already exists (see 2.3).

To add a variant:

1. Open the product, then scroll to Stock & Variants and tap Create variant.
2. Enter the variant name (e.g. “Large”), its price, stock and — if used — its barcode.
3. Optionally set an expiry date.
4. Tap Save. Repeat for each version.

Figure 13. Creating a variant with its own price and stock.

Figure 14. The list of variants under one product.

2.5 Creating a bundle

A bundle groups several products and sells them together for one price — for example a “Tea + Sugar + Bread” morning combo.

To create a bundle:

1. Open Products, tap Add, then choose Pack / Bundle.
2. Select the products that go inside the bundle.
3. Set the single bundle price.
4. Tap Save.

Figure 15. Selecting products for a bundle sold at one price.

2.6 Generating and printing barcodes

A barcode is the striped code you scan to find a product instantly. Factory products already have one, but you can also make your own — useful for goods with no printed code, such as small bags of rice from a large sack.

To generate and print barcodes:

1. Open the barcode sheet / label screen.
2. Choose the products you want labels for; the app builds a printable sheet of codes.
3. Tap Print (or Export PDF) to produce the sheet.
4. Print it, cut the labels, and stick one on each item or shelf.

Figure 16. Building a sheet of barcode labels for your products.

Figure 17. The printable barcode sheet, ready to cut and stick.

Tip: Once items carry a code, a new helper can run the counter by scanning — without knowing your prices by heart.

2.7 Receiving stock

Receiving stock tells the app that new goods have arrived, and raises your stock counts. Recording the purchase cost here is what makes your profit figures true.

To receive stock:

1. Add the products to the cart at the sales screen (or open Receive stock).

2. Choose Receive stock.
3. Enter the purchase cost and the quantity received.
4. Tap Confirm. Stock goes up automatically.

Figure 18. Entering purchase cost and quantity when goods arrive.

2.8 Adding a customer

Save the people who buy from you — especially anyone you give credit to — so you can track their debts and reach them later.

To add a customer:

1. Open Customers from the Menu, then tap Add.
2. Enter the name, phone number and address.
3. Tap Add.

Tip: The phone number is the most useful field — it unlocks call, SMS and WhatsApp reminders from inside the app.

2.9 Adding a supplier

Suppliers are the people you buy goods from. Recording them lets you track what you owe and log new purchases.

To add a supplier:

1. Open Suppliers from the Menu, then tap Add.
2. Enter the supplier name and contact details.
3. Tap Save.

2.10 Adding staff and setting permissions

If you have employees, give each one their own account and control exactly what they can do. This keeps your sensitive numbers private and lets the app show who did what.

To add an employee:

1. Open Users (Profile → Users, or from the Menu), then tap Add.
2. Enter the employee's name and a password or PIN.
3. Tap Save to create the account.

Permissions <

Figure 22. Creating an employee account.

To set what an employee can do:

1. Open the employee from the Users list.
2. Turn each permission on or off — for example: make sales, see profit, give discounts, manage stock.
3. Tap Save.

Create User

Permissions

Choose what this user is allowed to do. Unchecked = not allowed.

- ☐ Add products
- ☐ Edit products
- ☐ Delete products
- ☐ Manage variants
- ☐ Adjust stock
- ☐ Edit customers
- ☐ Refund sales
- ☐ Open / close drawer
- ☐ Sell only (no stock, no profit)

Status

Active ☒

Figure 23. Permission switches control each employee's access.

Important: Give every employee a separate account. Sharing one account hides who did what and exposes your private figures.

3 Making a Sale

Selling is the core of the app. This chapter covers finding a product, taking payment, selling on credit, quotes and refunds.

3.1 Finding a product

At the Point of Sale screen you have three ways to find a product quickly.

Figure 24. The three ways to find a product: search box, category tabs and barcode icon.

To find a product:

1. Type the first letters of its name in the search box; or
2. Tap a category tab to narrow the list; or
3. Tap the barcode icon and point the camera at the code.
4. Tap the product to add it to the cart. Tap again to add another.

Figure 25. The Point of Sale screen — tap a product to add it to the cart.

Figure 26. Scanning a barcode adds the product automatically.

3.2 Selling for cash

This is the everyday sale: the customer pays now.

To make a cash sale:

1. Add the products to the cart (see 3.1).
2. Open the cart and check the items, quantities and total.
3. Tap Sale.
4. Enter the amount the customer gave you; the app shows the change to return.
5. Choose the payment method (cash, Bankily, Sada...).
6. Tap Pay. The sale is recorded and a receipt is produced.

Figure 27. The cart — review items and total before charging.

Figure 28. The action buttons: Sale, Debt, Quote and Receive stock.

Field descriptions — Payment

Amount paid	What the customer handed over. The app subtracts the total to show the change.
Payment method	How they paid: cash or a mobile-money service. Record it correctly so your end-of-day cash count matches.
Customer	Optional. Attach a saved customer to earn loyalty and keep their history.
Coupon	Optional discount code (see 3.3).

Figure 31. Sale completed — the confirmation and receipt number.

Figure 32. From the receipt you can print, edit, undo or repeat the sale.

Note: You can hide the confirmation screen in Preferences for faster selling (see 9.1).

3.3 Applying a coupon or discount

To apply a coupon:

1. On the payment screen, tap the coupon / discount field.
2. Enter or select the coupon.
3. The total updates to show the discounted amount, then tap Pay.

Figure 33. Applying a coupon reduces the total before payment.

3.4 Selling a product that has variants

To sell a variant:

1. Tap the product at the sales screen.
2. Choose the variant (size, colour, flavour) from the list that appears.
3. The chosen variant is added to the cart at its own price.

Figure 34. Choosing which variant to sell.

3.5 Selling on credit (debt)

When a trusted customer takes goods now and pays later, record it as a debt against their name.

Before you begin:

- The customer is saved in your customer list (see 2.8).

To sell on credit:

1. Add the products to the cart.
2. Tap Debt operation instead of Sale.
3. Select the customer who will owe the amount.
4. Confirm. The debt is recorded under that customer.

Figure 35. Choosing Debt operation to sell on credit.

Figure 36. Selecting the customer who owes the debt.

3.6 Sending a quote

A quote is a price offer with no sale. Use it when a customer asks “how much for all this?” but is not buying yet.

To send a quote:

1. Add the products to the cart.
2. Tap Quote.
3. Select the customer.
4. Send the quote (for example over WhatsApp). You can turn it into a sale later.

Figure 37. Sending a price quote without selling.

3.7 Editing, undoing or reprinting a sale

To change a sale you just made:

1. Open the receipt (or find the sale in Sales history).
2. Choose Edit to correct it, Undo to cancel it, Repeat to sell the same again, or Print to reprint.

Figure 38. Receipt options: edit, undo, repeat, print.

3.8 Refunding a sale

To refund a returned item:

1. Open Sales history and tap the original sale.
2. Tap Process refund.
3. Choose the quantity being returned and confirm.
4. The money and stock are corrected automatically.

Figure 39. Open the original sale to start a refund.

Figure 40. Confirming the quantity to refund.

3.9 Point-of-sale extras

While selling, a small menu holds extras: a calculator, a customer's debts, and a switch for how products are displayed.

Figure 41. The POS options menu.

4 Products and Inventory

This chapter covers browsing products, reading their details, changing prices in bulk, and keeping stock counts correct.

4.1 Browsing products

Products is the master list of everything you sell. Search it, filter by category, add products or update prices.

Figure 42. The product catalogue.

4.2 Reading product details

Tap any product to see its price, cost, barcode, current stock and a low-stock warning.

Figure 44. Stock level, unit and the button to create variants.

4.3 Updating prices in bulk

To update prices:

1. Open Products, then tap Update prices.
2. Edit each product's sale price and cost directly in the list. The margin is shown as you type.
3. Tap Done.

Figure 45. Editing sale price and cost, with live margin.

Tip: After a delivery with new costs, update all affected prices here in one sitting.

4.4 Checking and adjusting stock

Inventory shows how much you have of everything and lets you correct a count when the shelf and the app disagree.

To adjust a stock count:

1. Open Inventory from the Menu.
2. Filter by In stock or Low if needed.
3. Tap the product, then add or remove a quantity. The before/after value is shown.
4. Confirm.

Figure 46. Stock levels for every product, with filters.

Figure 47. Adjusting a quantity with a before/after preview.

4.5 Seeing a product's profit

This shows how much profit one product made, how many sold, and the money it brought in, per day, week or month.

Figure 48. One product's profit and quantity sold.

5 Customers and Debts

This chapter covers your customer records and collecting the money they owe.

5.1 The customer list

All your saved customers, their phone numbers and what each one owes. Tap a customer to open their profile or debts.

Figure 49. The customer list.

5.2 The customer profile

A full profile with one-tap call, SMS and WhatsApp, what the customer usually buys, and their loyalty and spending.

Figure 50. A customer's profile and contact buttons.

5.3 Collecting a single debt

To collect one debt:

1. Open Debts from the Menu (or the customer's profile).
2. Tap the debt to open its details.
3. Tap Process refund / Collect.
4. Confirm to mark the full debt as paid.

Figure 51. All unpaid debts, with the total owed.

Profile

Figure 52. One debt, itemised, with print and collect.

Figure 53. Confirming collection before marking the debt paid.

Important: Only confirm collection after the money is in your hand. Once paid, the debt leaves the pending list.

5.4 Paying all of a customer's debts

To settle everything a customer owes:

1. Open the customer's debts.
2. Tap Pay all debts.
3. Choose the payment method and confirm.

Figure 54. All debts of one customer.

Figure 55. Settling every debt at once.

6 Suppliers

Suppliers are the people you buy from. This section shows what you owe each one and lets you record new purchases. See 2.9 to add a supplier.

6.1 Suppliers overview

Figure 56. The people you buy from and what you owe them.

7 Cash and Money

This chapter keeps your money honest: where it sits, income that is not a sale, expenses, and a printable cash report.

7.1 My Cash

An overview of your money and where it is — cash in the drawer, Bankily, Sada — because your money is never one single pile.

Figure 57. My Cash — how much you have and where it is.

7.2 Recording income

To record income that is not a sale:

1. Open My Cash, then tap Add money in.
2. Enter the amount, a note, a category and the payment method.
3. Tap Save.

Figure 58. Recording incoming money.

7.3 Recording an expense

To record an expense:

1. Open My Cash, then tap Add money out.
2. Choose Expense, enter the amount and a category (rent, salary, supplies...).
3. Tap Save.

Figure 59. Recording money that leaves the shop.

Note: Profit is what remains after expenses. A shop that only records sales always thinks it is richer than it is.

7.4 Exporting a cash report

To export a cash report:

1. Open My Cash.
2. Tap Export PDF.
3. Share or save the generated report.

Figure 60. The exported cash report.

8 Reports

Reports look back at what happened so you can plan what comes next.

8.1 Sales history

Every sale you made, with total, average and count. Tap a sale to see its full details.

Figure 61. The complete record of your sales.

Figure 62. One sale's details, with print and refund options.

8.2 Statistics

Totals for any period you choose: sales, count, average sale, tax, and a breakdown of payment methods.

Figure 63. The statistics report for a chosen period.

8.3 Quotes

Every quote you sent. A quote can be converted into a sale later.

Figure 64. Your sent quotes.

8.4 Profit and loss

The truth-teller: net profit (what is really yours), margin, revenue, cost of goods and expenses.

Figure 65. Net profit after everything.

Tip: Watch net profit over months. Rising sales but flat profit means costs are creeping up — you will spot it here.

9 Settings

Settings fit the app to your shop and your staff.

9.1 Preferences

Fine-tune how selling feels: hide the success screen for speed, show/hide the scanner button, round amounts, and more.

Figure 66. Preferences control the sales flow and display.

9.2 More and theme

Manage devices, change your password, coupons, switch light/dark look, and log out.

Figure 67. Extra settings, including light/dark theme.

9.3 Users

Add employees and control what each can do. See 2.10 for the full procedure.

Figure 68. The list of staff accounts.

9.4 Devices

The phones linked to your shop. Revoke any device instantly if it is lost or an employee leaves; unused devices are removed automatically.

Figure 69. Devices connected to your shop.

Important: Lost a phone? Revoke it here at once — your data stays safe even if the device is gone.

10 Sync and Backup

Syncing saves a safe copy of your data to the cloud and keeps multiple phones showing the same shop.

10.1 Syncing your data

To back up now:

1. On the Home screen, tap Sync Now.
2. Wait for the confirmation that sync completed.

Figure 70. The Sync Now button on the Home screen.

Figure 71. Sync status, last-sync time and support contacts.

Tip: Sync at least once at the end of each day, and before switching devices. A recent last-sync time means you are protected.

11 Marketing

The marketing hub helps you bring customers back — reminders, offers and a shareable catalogue.

11.1 The marketing hub

Figure 72. The marketing hub.
